

Somuah Julius Mcbraham Paapa-Boateng

Backend & API Developer | Software Engineer | Cybersecurity & Ethical Hacking Enthusiast

Cape Coast, Ghana | +233 53 335 1767 | juliusmcbrahamsomuah@gmail.com
github.com/khophisnow | linkedin.com/in/khophisnow | julius-somuah.netlify.app

Professional Summary

Backend and API Developer with experience building secure, scalable web applications using Node.js, NestJS, Express.js, TypeScript, PostgreSQL, Prisma, and MySQL. Experienced in REST API design, authentication, role-based access control, API documentation, testing, and database design. Led backend development and system integration for multi-tenant academic management and campus community platforms while applying security-aware development practices. Active cybersecurity and ethical hacking enthusiast with hands-on experience in TryHackMe labs, CTF competitions, Linux, and secure software development principles.

Education

Bachelor of Science in Computer Science

University of Cape Coast, Ghana

Expected 2028

Technical Skills

Languages: TypeScript, JavaScript, PHP, SQL, HTML, CSS

Backend Development: Node.js, NestJS, Express.js, REST APIs, JWT, Passport.js, Prisma, TypeORM

Databases: PostgreSQL, MySQL, schema design, relational modelling, migrations

API & Architecture: Swagger/OpenAPI, authentication, authorization, RBAC, multi-tenant systems, API security

Testing & Tools: Jest, Supertest, Postman, Docker, Git, GitHub, Linux

Frontend Integration: React, Vite, Next.js, responsive interfaces, API consumption, frontend-backend debugging

Cybersecurity: Nmap, Burp Suite, Hydra, WPScan, Gobuster, Metasploit, TryHackMe, CTFs

Selected Projects

EduManage – Multi-School Academic Management Platform

2026

Backend Developer & System Integration Engineer

[Demo Site](#) | [Private Repository](#)

- Led backend development and system integration for a multi-tenant academic management platform supporting multiple schools through a unified backend architecture.
- Transformed an initially static frontend prototype into a fully functional application by integrating backend services, authentication, and live database workflows.
- Built secure REST APIs using NestJS, TypeScript, Prisma, and PostgreSQL.
- Implemented JWT authentication, refresh-token rotation, role-based authorization, tenant isolation, and secure session management.
- Designed and maintained a platform comprising 46 modules, 8 user roles, and over 100 API endpoints.
- Collaborated closely with the frontend developer to align API contracts, resolve integration issues, implement requested enhancements, and deliver end-to-end functionality.
- Maintained Swagger/OpenAPI documentation, automated testing workflows, health checks, and operational safeguards.

WhatsUpUCC – Campus Events & Community Platform

2025 – 2026

Project Lead / Primary Backend Developer & Integration Engineer

[Live Site](#) | [API Docs](#)

- Served as Project Lead and primary backend developer in a 3-member team building a platform for campus engagement, event discovery, and community interaction.
- Designed backend architecture using Express.js, Prisma, PostgreSQL, and JWT authentication.
- Built and maintained 30+ API endpoints across 11 backend modules supporting authentication, events, media uploads, notifications, and moderation workflows.
- Integrated frontend applications with backend services, replacing mock data with live database-driven functionality.
- Implemented Swagger/OpenAPI documentation, request tracking, rate limiting, and configurable CORS policies.
- Collaborated with frontend developers during testing and deployment to resolve integration issues and deliver a production-ready platform.

Personal Portfolio Website

2025

Designed and Deployed

[Live Site](#)

- Built and deployed a responsive portfolio website using React and modern web technologies to showcase projects,

technical expertise, and leadership experience.

Experience

Software Developer Intern *Trinity Software Center, Kumasi*

Sep 2025 – Oct 2025

- Built backend modules for a restaurant management API using NestJS, TypeScript, MySQL, and TypeORM.
- Designed and implemented REST endpoints across authentication, menu, orders, delivery, inventory, and user-role modules.
- Implemented JWT authentication, Passport.js strategies, and role-based guards for controlled system access.
- Created database models, migrations, seed scripts, Swagger documentation, and Jest/Supertest API tests.
- Used Docker and Postman to support repeatable setup, debugging, and API validation.
- Contributed to the design of scalable backend architecture and database workflows for a restaurant management platform.

Co-Founder, Full-Stack Developer & STEM Trainer *CAS-7 TECHNOLOGY COMPANY, Kumasi*

Jan 2023 – Present

- Co-founded a practical technology training initiative focused on web development, Arduino, electronics, and robotics.
- Trained 150+ students and facilitators through project-based lessons using HTML, CSS, JavaScript, PHP, Git, and Arduino.
- Supported curriculum design, facilitator onboarding, learner mentorship, web interfaces, and Arduino prototypes.

Beginner Lead / Former DSA Co-Lead *Amalitech Coding Club, University of Cape Coast*

Jun 2025 – Present

- Facilitate beginner sessions in HTML, CSS, JavaScript, Git, and project-based web development.
- Reappointed to continue leading the beginner track based on club impact and learner progress.
- Formerly co-led DSA sessions covering arrays, recursion, sorting, trees, graphs, and technical problem-solving practice.

Leadership, Cybersecurity & Achievements

- **Cybercon CTF 2025:** 1st Runner-Up with team under the CITSA Hackathon.
- **CITSA Cybersecurity Club, UCC:** Active member practicing web exploitation, Linux enumeration, privilege escalation, vulnerability assessment, and CTF collaboration.
- **TryHackMe:** Completed practical labs including RootMe, Vulniversity, Mr. Robot, Metasploit Introduction, Windows Fundamentals, and Active Directory Basics.
- **Recognition:** Citation of Recognition – Leadership Excellence; CAS7TECH Certificate of Achievement.
