Julius Mcbraham Paapa-Boateng Somuah

Software Developer (Backend & API Developer) | Cybersecurity & Ethical Hacking Enthusiast | NestJS • Express • PostgreSQL • Prisma

Kumasi, Ashanti Region, Ghana

Summary

I'm Somuah Julius Mcbraham Paapa-Boateng, also known online as KhophiSnow — a Computer Science student at the University of Cape Coast and a software developer focused on backend and API development. I build secure, scalable web applications using technologies such as Node.js, NestJS, Express.js, TypeScript, PostgreSQL, Prisma, MySQL, JWT authentication, REST APIs, and Swagger/OpenAPI documentation. My recent work includes EduManage, a multi-school academic management platform with 46 modules, 8 user roles, and 100+ API endpoints, and WhatsUpUCC, a campus events and community platform where I served as Project Lead and primary backend developer in a 3-member team. I enjoy turning frontend prototypes into fully functional applications by designing backend systems, building APIs, connecting databases, implementing authentication, resolving integration issues, and delivering end-to-end product functionality. Beyond software development, I am actively growing in cybersecurity and ethical hacking through TryHackMe labs, CTF competitions, Linux security practice, web exploitation, vulnerability assessment, and tools such as Nmap, Burp Suite, Hydra, WPScan, Gobuster, and Metasploit. I'm passionate about building technology that is useful, secure, and scalable — and I'm working toward becoming a strong backend engineer with deep cybersecurity awareness.

Experience

AmaliTech

1 year 1 month

Beginner Lead (Volunteer) – Amalitech Coding Club (ACC-UCC)
January 2026 - Present (6 months)

Cape Coast

Following my initial tenure, I was invited by the newly elected ACC-UCC President to continue co-leading the Beginners Club in recognition of the impact and progress achieved during my first term.

In this renewed leadership role, I continue organizing structured beginner training sessions, mentoring members in web development and programming fundamentals, and strengthening the foundation of the club's learning culture.

Beginner Lead (Volunteer) – Amalitech Coding Club (ACC-UCC)
June 2025 - December 2025 (7 months)

Cape Coast

On June 5, 2025, I was appointed Beginner Lead for the Amalitech Coding Club at the University of Cape Coast (ACC-UCC), an initiative by Amalitech to support student developers.

In this volunteer role, I organize beginner-friendly training sessions in web development and programming fundamentals, helping students build practical foundations in HTML, CSS, JavaScript, Git, problem-solving, and project-based learning.

Key Responsibilities:

- Leading weekly beginner training sessions
- Teaching core front-end skills: HTML, CSS, JavaScript, Git
- Organizing study schedules and collaborative challenges
- Managing member attendance and progress tracking
- Providing mentorship and debugging support
- Promoting team learning and confidence-building through projects

Fall–Spring Data Structures & Algorithms Co-Lead (Volunteer)
September 2025 - November 2025 (3 months)

Cape Coast, Central Region, Ghana

On September 2025, I was appointed as Co-Lead for the Fall–Spring Data Structures & Algorithms (DSA) track at the Amalitech Coding Club, University of Cape Coast.

In this volunteer role, I guide peers through solving DSA problems using platforms like LeetCode and HackerRank, helping them develop strong foundations in algorithms and problem-solving techniques. I co-organize weekly study sessions and create structured learning paths to support students preparing for technical interviews.

Key Responsibilities:

- Co-leading DSA study sessions with a focus on algorithms and data structures.
- Guiding peers through coding challenges and problem-solving approaches.
- Teaching core DSA topics: arrays, recursion, linked lists, sorting, trees, and graphs.
- Designing study roadmaps to build consistency and growth.
- Encouraging collaboration, teamwork, and technical discussion.

**Computer Science and IT Students Association (CITSA) -UCC
Cybersecurity Member – CITSA Cybersecurity Club (UCC)**
February 2025 - Present (1 year 5 months)

Cape Coast, Central Region, Ghana

I joined the CITSA Cybersecurity Club under the Computer Science and IT Students Association (UCC), where I began my active journey into ethical hacking, penetration testing, and Capture the Flag (CTF) competitions. Through this role, I've participated in hands-on labs, weekly study groups, and organized training sessions focused on cybersecurity concepts and offensive/defensive tools. I train using TryHackMe, where I've completed multiple rooms, earned badges, and grown in CTF strategy. I also prepared with teammates for the Cybercon CTF hosted under CITSA — where we placed 1st runner-up.

Key Responsibilities:

- Participating in practical cybersecurity labs and boot-to-root CTF challenges
- Using tools like Hydra, dirb, gobuster, nikto, wpscan, Nmap, Burp Suite, and John the Ripper
- Rooting boxes (e.g., Mr. Robot, Vulniversity, RootMe) on TryHackMe
- Studying attack vectors: brute-force, privilege escalation, SUID exploitation, reverse shells
- Leading or co-organizing CTF prep with teammates using a structured weekly study plan
- Collaborating with peers on walkthroughs, reverse engineering, and payload crafting
- Engaging in cybersecurity competitions and training for upcoming hackathons

CAS-7 TECHNOLOGY COMPANY
Full-Stack Developer & STEM Trainer
January 2023 - Present (3 years 6 months)

Kumasi, Ashanti Region, Ghana

After completing the first badge, I transitioned into a lead training role at CAS-7 TECHNOLOGY. I facilitate hands-on sessions in web development (HTML,

CSS, JavaScript, PHP, Git) and STEM-focused Arduino and electronics projects.

I also contribute to curriculum development and the onboarding of new facilitators to ensure high-quality, scalable tech education for primary, JHS, and SHS students.

Key Responsibilities:

Trained 150+ students and facilitators in web dev and Arduino

Led project-based sessions using real-world applications

Built interactive websites and Arduino prototypes with learners

Mentored junior facilitators and guided lesson delivery

Participated in outreach events and program expansion

In addition to leading training sessions, I continue to support CAS7TECH's growth and vision as a co-founder.

Martyrs of Christ World Outreach / Father's Heart Chapel International

Media & Technical Team (Volunteer)

August 2023 - Present (2 years 11 months)

Kumasi, Ashanti Region, Ghana

I serve on the Media and Technical Team (MOCWO Publicity), supporting technical operations during services and outreach events at Father's Heart Chapel International.

My work involves setting up and mixing sound, managing service recordings, and handling technical support for both live and streamed church activities. I also contribute to special outreach events hosted by MOCWO.

Key Responsibilities:

- Mixing live sound during services and outreach events
- Setting up microphones, speakers, and technical gear
- Managing media for services: recordings, projection, and playback
- Supporting technical setup for special programs and conferences
- Collaborating with other team members to ensure smooth service flow
- Maintaining equipment and advising on upgrades or fixes

Trinity Software Center

Software Developer Intern

September 2025 - October 2025 (2 months)

Kotei-Deduako, Kumasi

I completed a two-month Software Development Internship at Trinity Software Center, where I contributed to the backend development of a restaurant management API using NestJS, TypeScript, MySQL, and TypeORM. During the internship, I helped build and maintain modules for authentication, menu management, orders, deliveries, inventory, user roles, and prepared orders. I also worked on REST API design, database modelling, authentication, testing, API documentation, and debugging.

Key contributions:

- Built backend modules for a restaurant management API using NestJS, TypeScript, MySQL, and TypeORM.
- Designed REST endpoints across authentication, menu, orders, delivery, inventory, and user-role modules.
- Implemented JWT authentication, Passport.js strategies, and role-based guards.
- Created database models, migrations, and seed scripts for repeatable setup.
- Maintained Swagger documentation and tested APIs with Postman.
- Wrote and ran unit/e2e tests using Jest and Supertest.
- Collaborated with team members on debugging, testing, and feature delivery.

Skills:

TypeScript · Node.js · NestJS · TypeORM · MySQL · JWT · Passport.js · Jest · Supertest · Postman · Swagger/OpenAPI · REST API Development · Backend Development

aYo Ghana

Field Sales Executive

June 2023 - September 2024 (1 year 4 months)

Accra, Greater Accra Region, Ghana

As a part-time Field Sales Executive with aYo Ghana, I engaged with customers across Kumasi and remote platforms to promote micro-insurance and digital finance solutions.

I led outreach efforts, built strong customer relationships, and contributed to improving our customer management systems and retention strategies.

Key Responsibilities:

Promoted aYo insurance packages and mobile finance products

Maintained customer records and tracked sales using CRM tools

Developed client-focused strategies to increase product adoption

Built long-term trust through professional, human-centered communication

Assisted in optimizing field sales operations for remote execution

CAS-7 TECHNOLOGY COMPANY

Co-Founder & Trainee – First STEM Badge (CAS7TECH I.T AND ENGINEERING CENTER)

November 2022 - December 2022 (2 months)

Kumasi, Ashanti Region, Ghana

As a co-founder of CAS-7 TECHNOLOGY, I joined the first badge of our flagship training initiative — CAS7TECH I.T AND ENGINEERING CENTER — not just to co-lead its launch, but to participate hands-on as a trainee.

The 2-month program focused on practical training for SHS leavers in web development, Arduino programming, and electronics. I used this opportunity to refine our teaching model, validate the learning experience, and gain deeper insight into how the program could scale effectively.

Together with our first cohort, I built Arduino-based prototypes, worked on web development tasks using HTML, CSS, and JavaScript, and completed basic electronics projects using breadboards and sensors.

Key Highlights:

Helped design and test the training model for CAS7TECH I.T. AND ENGINEERING CENTER

Completed full training alongside students to optimize delivery

Built working web interfaces and sensor-based electronic projects

Took part in peer activities, mentoring early trainees, and evaluating curriculum delivery

Education

University of Cape Coast

Bachelor's degree, Computer Science

Prempeh College

High School Diploma, General Science · (September 2019 - September 2022)

Joy Standard School

Junior High School · (September 2018 - September 2019)

Heroes International School
Junior High School · (2006 - 2018)
